Art Unit: 1797

## **DETAILED ACTION**

## Claim Objections

- 1. Claims 1 and 7 are objected to for lack of antecedent basis in the claims.
- 2. With respect to claims 1 and 7, the claims recite the limitation "the dust-loaded hot-gaseous product." There is insufficient antecedent basis for such limitation in the claims. Appropriate correction is required.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office Action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- 4. Claims 1-8 are rejected under 35 U.S.C. 102(a) as being clearly anticipated by von Kossak (DE 10102963 C1). For the record, Examiner notes that the disclosure of the instant application is substantially similar and overlapping with that of von Kossak and that Figures 1 and 2 of the instant application are identical to Figures 1 and 2 of von Kossak.

Art Unit: 1797

- 5. With respect to claim 1, von Kossak discloses a method for gasification of a solid carbonaceous feed, wherein the gasification is performed in an elongated gasification reaction vessel comprising: (a) a gasifier unit (1); (b) a co-axial positioned cooled channel (7) through which the dust-loaded hot-gaseous product of the gasifier unit (5) is discharged from the reactor (5); and (c) means (6) to supply a quench gas to the dust-loaded hot-gaseous product at a position downstream of the gasifier unit (1), wherein to an annular space between the reactor wall (4) and the cooled channel (7) a dust-free gas is supplied at a rate sufficient to ensure that no dust-loaded hot gas will flow from the cooled channel (7) to the annular space (25a) (see von Kossak, Figs. 1 and 2, and accompanying text).
- 6. With respect to claim 2, von Kossak discloses wherein the pressure in the annular space (25a) is equal to or greater than the pressure in the cooled channel (7) (see von Kossak, column 4, lines 62-68; and column 5, lines 1-8).
- 7. With respect to claim 3, von Kossak discloses wherein the temperature of the dust-free gas is between 200°C and 350°C (see von Kossak, column 5, lines 9-13; Figs. 1 and 2, and accompanying text).
- 8. With respect to claim 4, von Kossak discloses wherein the dust-free gas is part of the gaseous product of the gasifier unit (1) from which dust has been removed downstream of the gasification reactor (5).
- 9. With respect to claim 5, von Kossak discloses wherein the dust-free gas is part of the quench gas (see von Kossak, column 5, lines 35-45; Figs. 1 and 2, and accompanying text).

Application/Control Number: 10/520,400

Art Unit: 1797

- 10. With respect to claim 6, von Kossak discloses wherein the means (6) to supply quench gas is provided with gas discharge openings (27) to supply quench gas to the cooled channel (7) and gas discharge openings (27) to supply quench gas to the annular space (25a).
- 11. With respect to claim 7, von Kossak discloses an elongated gasification reactor vessel comprising: (a) a gasifier unit (1); (b) a co-axial positioned cooled channel (7) through which the dust-loaded hot-gaseous product of the gasifier unit (1) is discharged from the reactor (5); and (c) means (6) to supply a quench gas to the dust-loaded hot gaseous product at a position downstream of gasifier unit (1), wherein also means to supply a dust-free gas to an annular space (25a) between the reactor vessel wall (4) and the cooled channel (7) is present (see von Kossak, Figs. 1 and 2, and accompanying text).
- 12. With respect to claim 8, von Kossak discloses wherein the means (6) to supply quench gas is provided with gas discharge openings (27) to supply quench gas to the cooled channel (7) and gas discharge openings (27) to supply quench gas to the annular space (25a) (see von Kossak, Figs. 1 and 2, and accompanying text).

## Conclusion

13. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Randy Boyer whose telephone number is (571) 272-7113. The examiner can normally be reached Monday through Friday from 10:00 A.M. to 7:00 P.M.

Application/Control Number: 10/520,400 Page 5

Art Unit: 1797

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn A. Caldarola, can be reached at (571) 272-1444. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
